

Mini Park Rangers

Parent's notes for Spiders

On your next walk with your Mini Park Ranger:

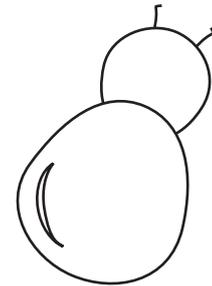

- Look for spider webs in shrubs, on fences or between small trees
- Check if they are empty or if there is a spider in the web
- If empty, use a spray bottle of water (set to "mist") to gently spray the web, making it easier to see
- Find spider webs of different shapes, patterns and sizes
- See if you can find a spiders' egg case - is it made of spider silk or a folded leaf?
- Can you see any insects stuck in the spider web?

Help your Mini Park Ranger learn the difference between spiders and insects?

- Spiders have 2 body parts; a head and abdomen, 8 legs and 2 fangs
- Insects have 3 body parts; a head, thorax and abdomen, 6 legs and 2 antenna

Mini Park Rangers, can you:

circle the pictures of spiders?

draw 8 legs on the spider?

Mini Park Ranger, spiders are interesting to watch, particularly if you are lucky enough to find a spider who is building a web, eating their dinner or moving from place to place. Remember to only look with eyes and don't ever touch webs or spiders with your hands.

A Mini Park Ranger cares for all living things.

Mini Park Rangers

A spider has 8 legs. Trace over the numbers below.

Join the dots to complete my web.

Draw some insects in my web for my dinner. Yum, Yum!
